

# Superstore Dataset – Data Cleaning Documentation

## 1. Document Goal

The goal of this document is to describe the data cleaning and preparation process performed on the Superstore dataset before analysis. The objective was to ensure that the data was accurate, consistent, properly formatted, and ready for Excel analysis, formulas, pivot tables, charts, and dashboards.

## 2. Dataset Cleaning Process

- Checked the dataset structure and identified the main Orders, Returns, and People sheets.
- Checked the dataset for duplicate records and reviewed the data for consistency.
- Checked important fields for missing values, including Order Date, Ship Date, Sales, Quantity, Discount, and Profit.
- Identified unnecessary blank columns and ensured the working data had a clear structure.
- Standardized date-related fields and ensured dates followed the required DD-MM-YYYY format where applicable.
- Used Excel functions such as MONTH(), YEAR(), DAY(), TEXT(), TRIM(), PROPER(), UPPER(), LOWER(), and LEN() for data transformation and validation.
- Checked numerical fields such as Sales, Quantity, Discount, and Profit for appropriate numerical formatting.
- Checked categorical fields such as Region, Category, Segment, Ship Mode, and Sub-Category for consistency.
- Verified formulas and calculated fields to ensure that the expected results were produced.

## 3. Final Result

After cleaning and formatting, the dataset was organized into a consistent structure suitable for further analysis. Dates, text fields, and numerical fields were standardized, unnecessary blank columns were identified, and the dataset was checked for duplicate records and missing information.

The cleaned Superstore dataset contains 9,994 order records covering the period from 2014 to 2017.

## 4. Outcome

- Data analysis
- Pivot tables
- Charts and graphs
- KPI calculations
- Sales and profit analysis
- Regional and category analysis
- Dashboard creation
- Business insights and reporting

**Conclusion:** The cleaned Superstore dataset is ready for structured analysis, visualization, dashboard development, and business reporting.
